THEPRA

Our Viscosity-Box trainer is an excellent way to help learners understand the principles of viscosity, through a blend of hands-on and e-learning, the key properties of different types of automotive oil.

This trainer includes three cylinders containing different types of oil and a stop-watch. Learners use this to measure the viscosity of oil at different temperatures and see how the viscosity index fluctuates from one type of oil to the next.

The accompanying e-learning is built in Electude's LMS and uses a combination of photo-realistic graphics/animations, text and assessment questions to engage the learner in this important topic. Students are guided to observe and discover the topic, while their progress is tracked and reported as they go.

ELECTUDE'S E-LEARNING COURSE OVERVIEW

Preliminary theory with Viscosity-Box (basic) *

- Engine oil EU
- Lubricating oil: properties

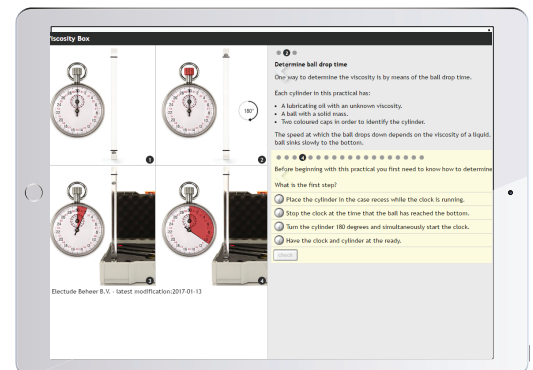

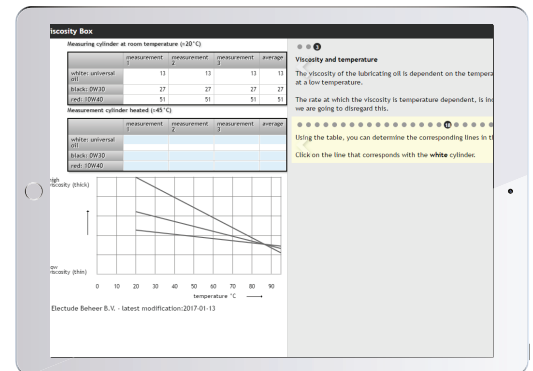

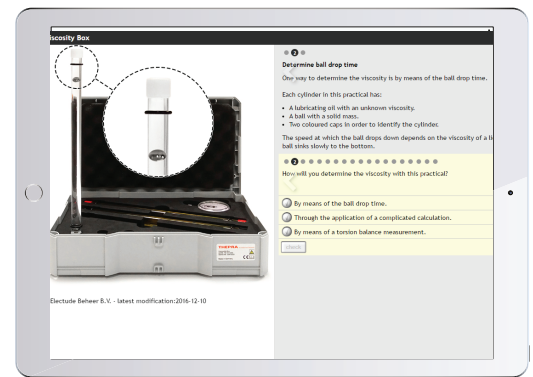

Practical assignments with Viscosity-Box (basic)

- Viscosity-Box

Duration

- Preliminary theory with Viscosity-Box (basic) - 76 minutes
- Practical assignments with Viscosity-Box (basic) - 93 minutes

* Separate license may apply for the Preliminary theory.

All product specifications are subject to change without prior notice.
